AUTISM AND SELF- REGULATION: FACILITATING PARTICIPATION AT SCHOOL AND IN THE COMMUNITY

Anna Greenspan, OTR/L

Alexandra Schriefer, OTR/L

Sarah Dean, OTR/L

February 20, 2020

Where We're From

- ❑ We currently have 161 students from 9 states and over 65 districts
- ❑ We employ over 170 staff members
 - ❑ Speech Language Pathologists
 - ❑ Intervention Specialists
 - ❑ Behavior Specialists
 - ❑ Occupational Therapists
 - ❑ Occupational Therapy Assistants
 - ❑ Associate Teaching Staff
 - ❑ Music Therapist
 - ❑ Art Therapists
 - ❑ Transitional Support Staff

Who We Are

- Anna Greenspan, OTR/L
- Alexandra Schriefer, OTR/L
- Sarah Dean, OTR/L

Our Goal

The goal of our presentation is to increase your knowledge of the developmental continuum as it relates to self-regulation, through sensory processing, emotional regulation and executive functioning skills.

Objectives

The presentation will include information regarding:

- The science behind the development of self-regulation
- Clinical tools used to measure sensory processing, emotional regulation and executive functioning skills
- Implementation of programming and supports to effectively build skills to support children with autism in managing their feelings, emotions and thoughts to foster participation in their learning and working environments

The Self-Regulation Continuum

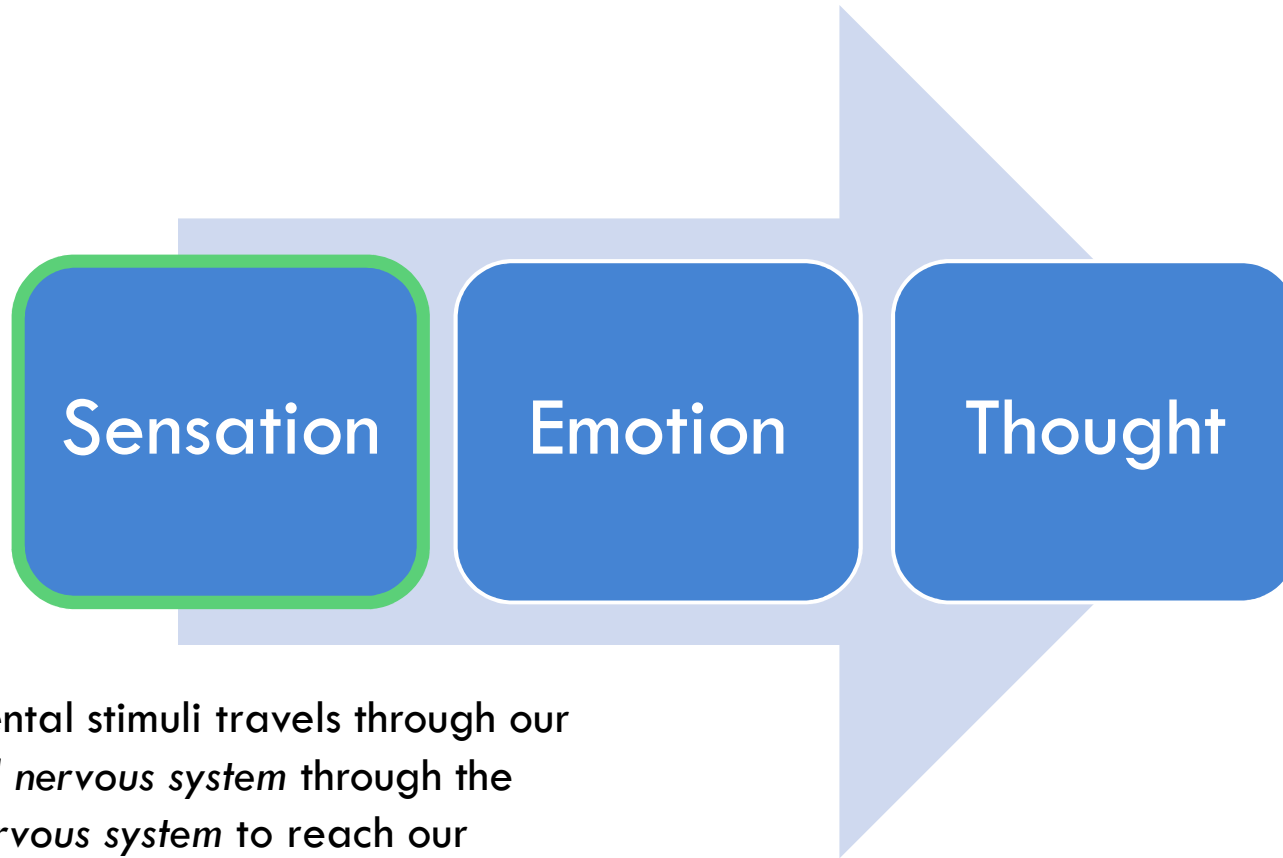

Sensation

Emotion

Thought

(Gibbs, 2017)

The Science Behind Self-Regulation

Environmental stimuli travels through our *peripheral nervous system* through the *central nervous system* to reach our brain.

(Gibbs, 2017)

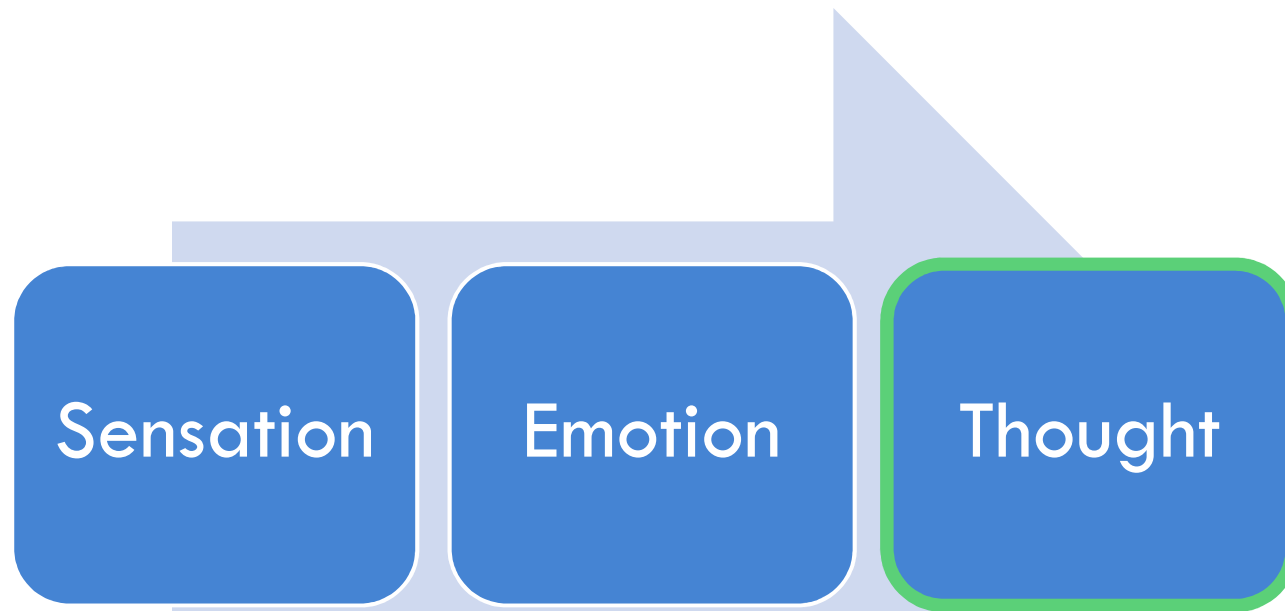

The Science Behind Self-Regulation

The sensation is filtered by the Reticular Activating System, located within the brainstem, and then travels to our *emotional brain area*. The emotional brain area is our *limbic system*.

(Gibbs, 2017)

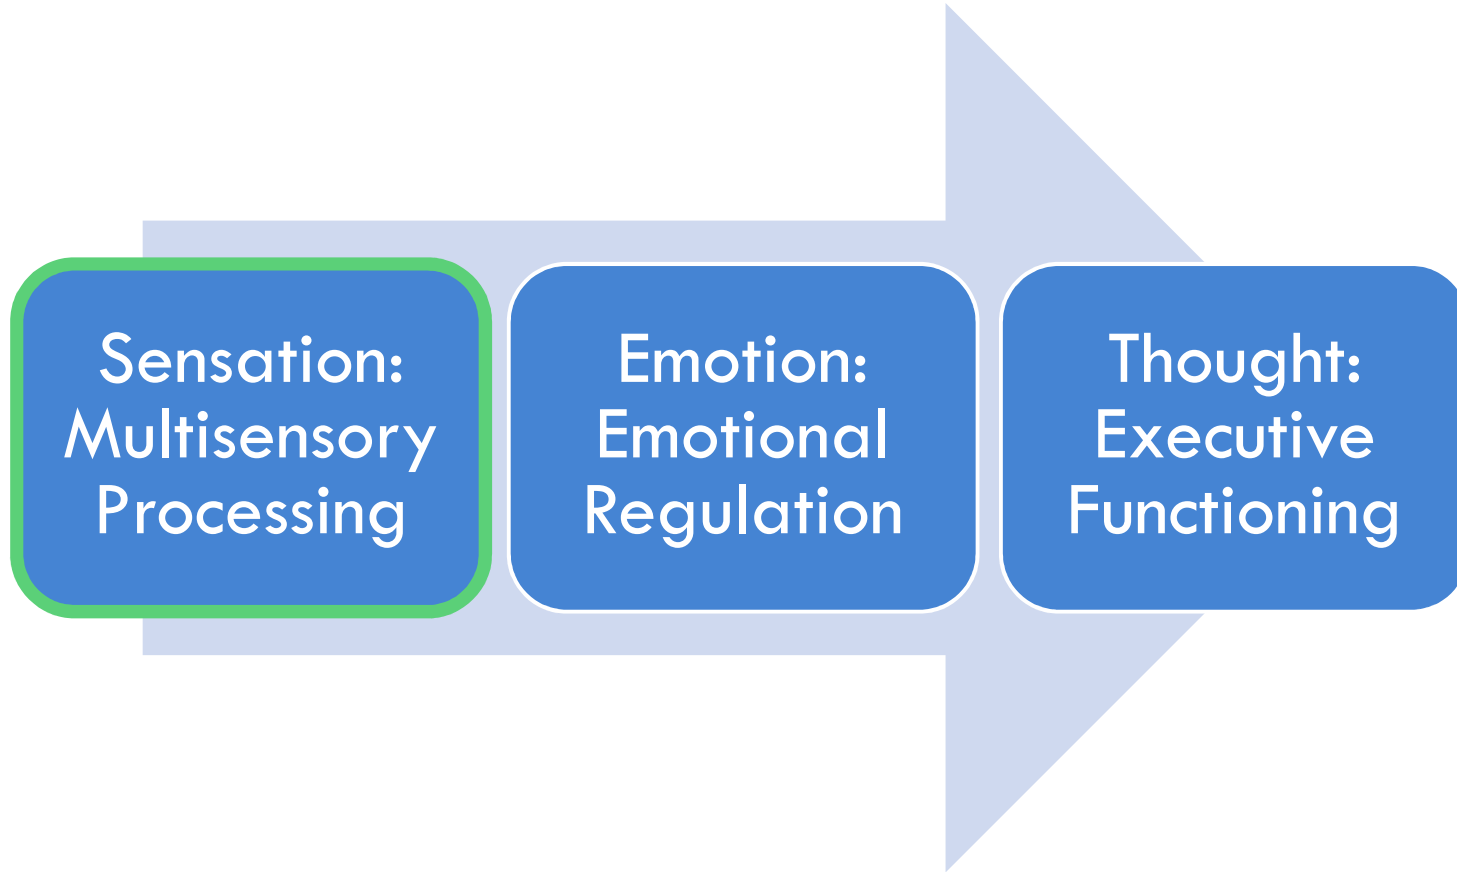

The Science Behind Self-Regulation

After sensation information travels through the emotional brain, it travels to our *prefrontal cortex* which is located within the *frontal lobe* of the brain.

(Gibbs, 2017)

Developmental Overview: Multisensory Integration

Developmental Overview: Multisensory Integration

□ Sensory Systems

□ Far Senses

- Auditory
- Visual
- Olfactory
- Gustatory
- Tactile

□ Near Senses

- Proprioceptive
- Vestibular
- Interoceptive
- Praxis

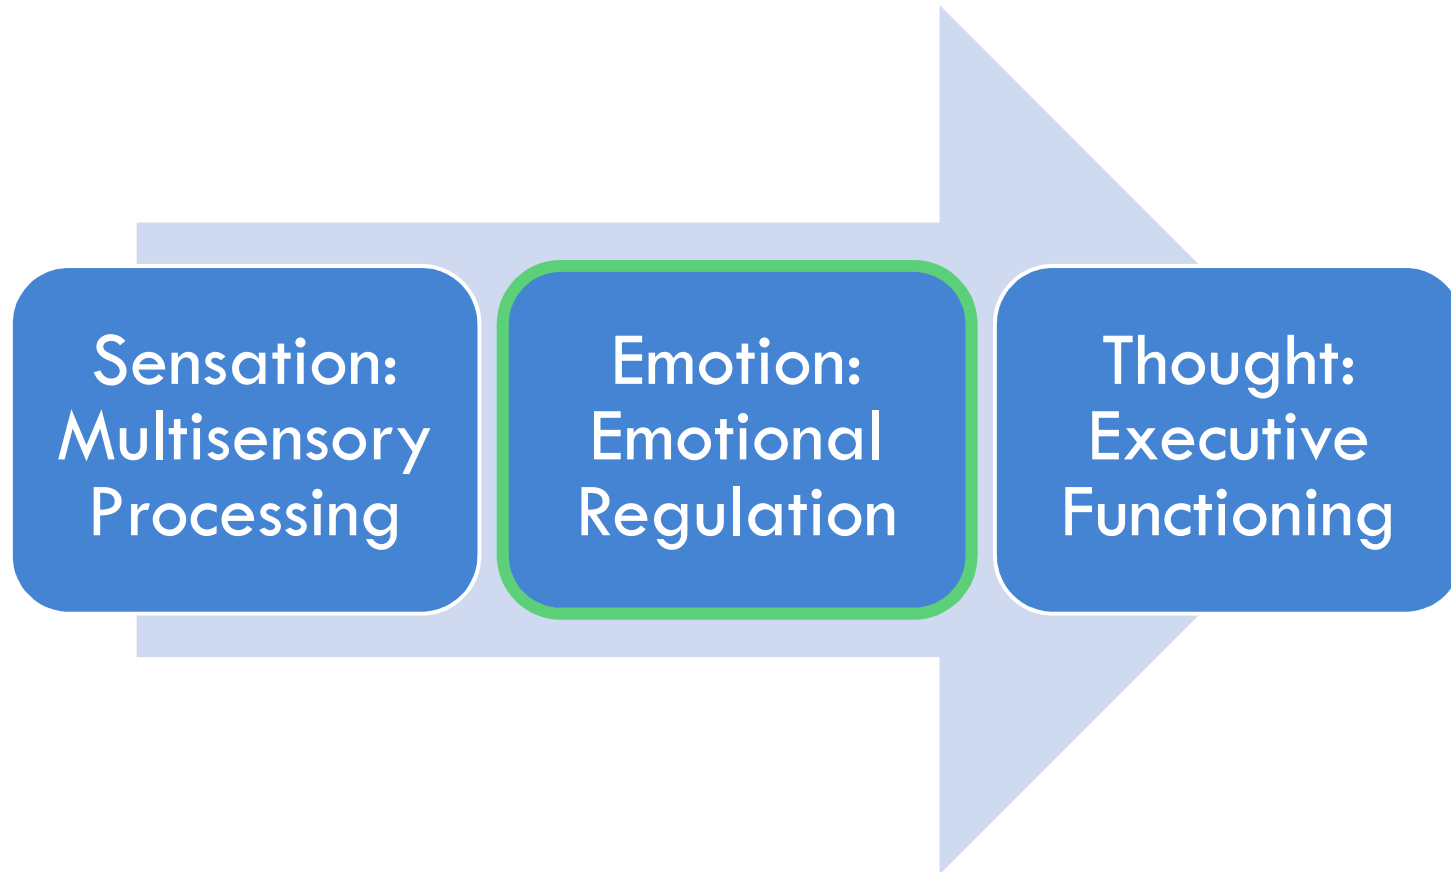

(Gibbs, V. D., 2017)
(Price, C. J., & Hooven, C., 2018)
(Sensory Processing Disorder, 2020)

Developmental Overview: Multisensory Integration

- Importance of sensory system synchrony for purposeful function
- Under-stimulation/over-stimulation lead to decreased engagement
- “Just right” input needed to maximize participation in daily life
- Research emphasizes the use of multisensory integration

Developmental Overview: Emotional Regulation

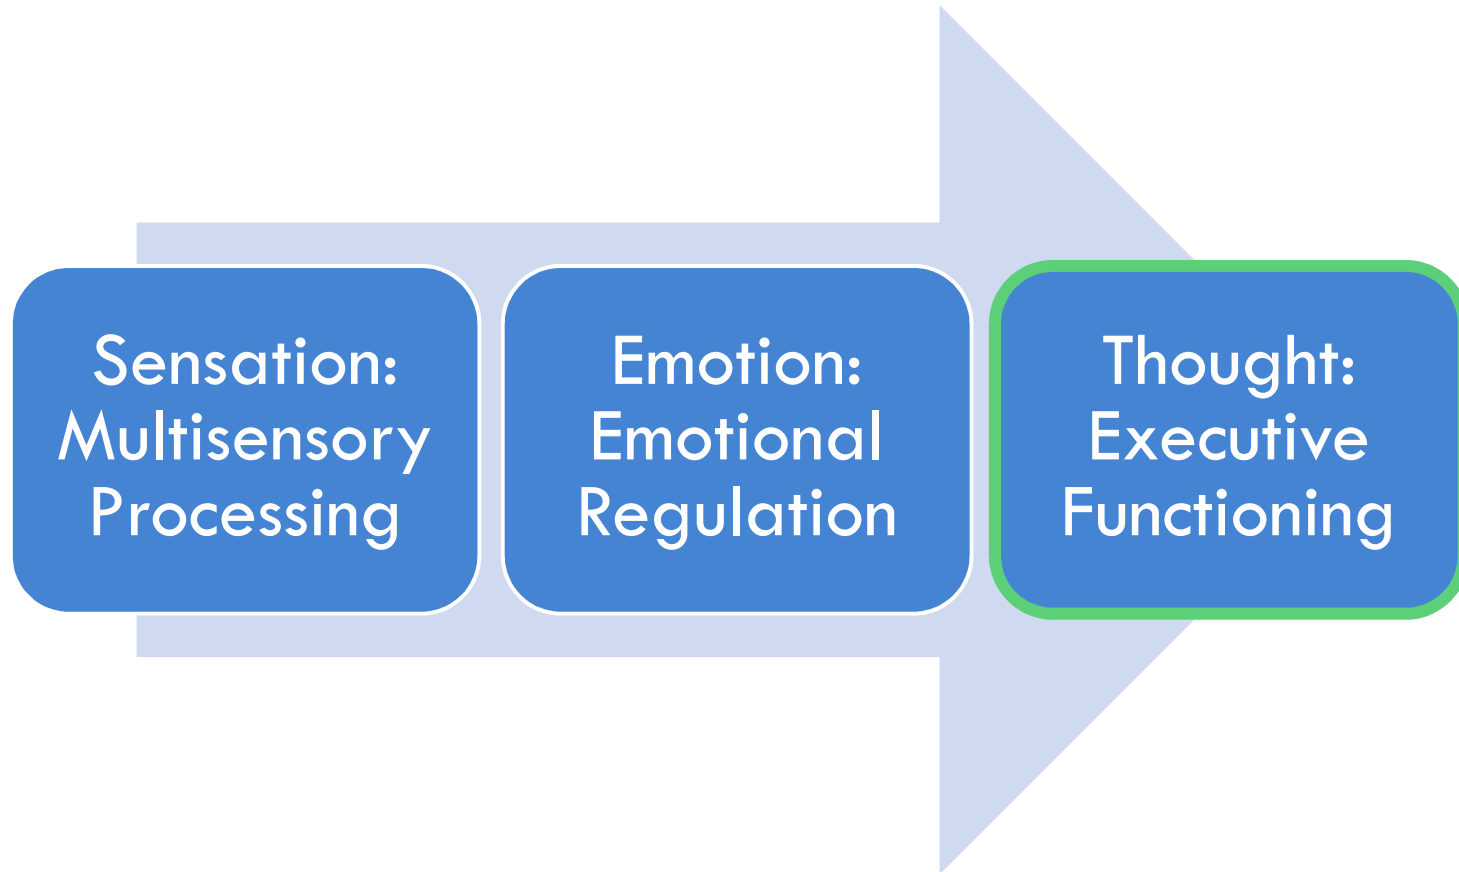

Developmental Overview:

Emotional Regulation: Building Blocks

- Science and Emotion
- Developmental age progression for skills that are essential for emotional regulation
- The importance of the involvement of the co-regulator

Developmental Overview: Executive Functioning

Developmental Overview: Executive Functioning

- Located in the prefrontal cortex within the frontal lobe of the brain
- Our conscious response to sensory and emotional experiences
- Comprised of several skills including:
 - ▣ *Flexibility* in thinking
 - ▣ *Making decisions*
 - ▣ *Using judgement*
 - ▣ *Inhibiting* unwanted or negative actions
 - ▣ *Problem-solving*
 - ▣ *Planning*
 - ▣ *Making sense of emotions*

The Evaluation Process

Clinical tools used to measure sensory processing, emotional regulation and executive functioning skills

Sensory Processing Assessments

- Standardized assessments
 - Sensory Profile 2
 - Sensory Processing Measure
- Clinical observations in the classroom and community
- Interviews with parents and the interdisciplinary team
- Individualized data collection

Emotional Regulation Assessments

Self-Regulation Identification and Teaching Program

- The purpose of this program is to identify self-regulation abilities as it relates to development, identify the involvement of the co-regulator and provide teaching tools for the purpose of advancing the student through the self-regulation continuum.

Process:

- The Self-regulation Identification and Teaching observation form is completed by the interdisciplinary team. The observational information completed by the interdisciplinary team provides the explanation of the child's necessary skills and involvement of the co-regulator. Additionally, it provides the interdisciplinary team with the teaching tools for the identification of the areas of needs. The teaching program is practiced for a minimum period of 3 months before the observational data is reevaluated and recorded again.

Self-Regulation Identification and Teaching Program cont.

The information that is collected gives the interdisciplinary team the information about the following:

- Self-Regulation skills observed as it relates to the developmental age
- Skill category
- The involvement of the co-regulator
- The teaching tools to advance the student through the developmental phases

Self-Regulation Identification and Teaching Program Phase 1: INTENSE						
Student: _____			Team: _____			
Developmental Age	Skill	Category	Observation 1	Observation 2	Observation 3	Teaching Tools to Support Development
0-3 months	Able to calm self (e.g., sucking thumb)	Emotion	Date: Yes: No: Comments:	Date: Yes: No: Comments:	Date: Yes: No: Comments:	
4-6 months	Initiate imitation skills (some movements and facial expressions)	Motor	Date: Yes: No: Comments:	Date: Yes: No: Comments:	Date: Yes: No: Comments:	

Phases of Co-regulator Involvement

Phases of Skills and Supports

PHASE IV - Period of growth: Adolescence through Adulthood

- Child demonstrates ability to self-manage

PHASE III - Period of growth: Adolescent

- Co-Regulator provides minimum support - adult provides "coaching" supports utilizing VIM (visual instruction mode), VOM (visual instruction mode), VEM (visual expression mode)
- Child is able to recognize and monitor own emotions, recognizing other perspectives and social norms within regulated state

PHASE II - Period of growth: Toddler/School age

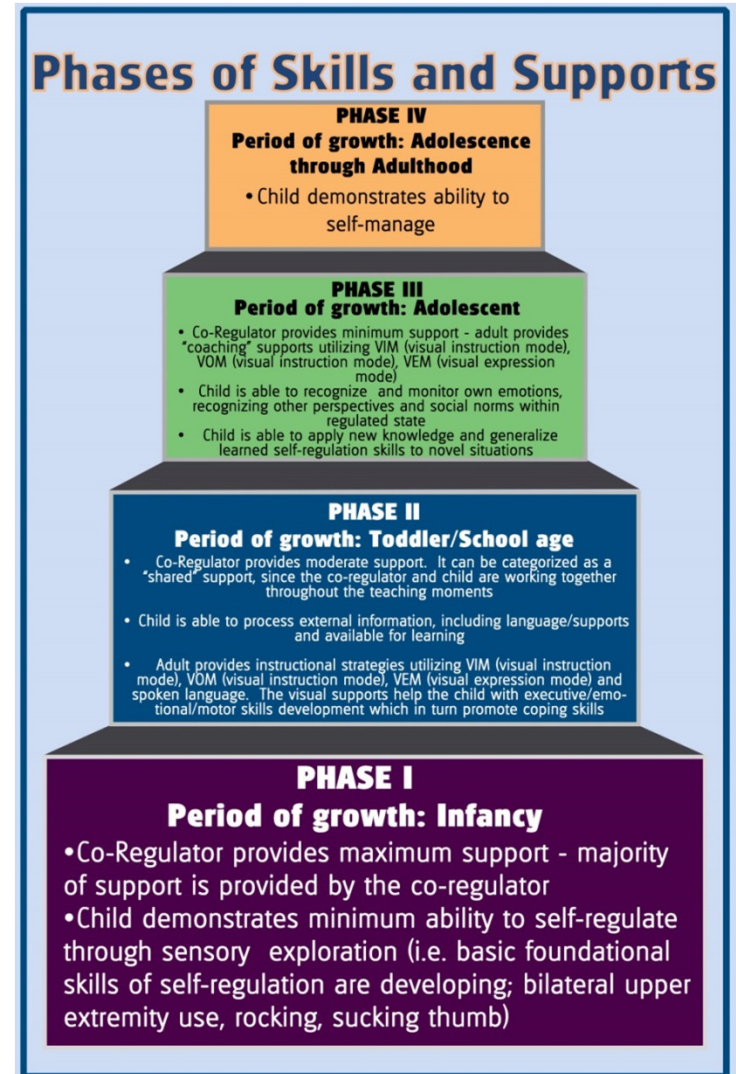

- Co-Regulator provides moderate support. It can be categorized as a "shared" support, since the co-regulator and child are working together throughout the teaching moments
- Child is able to process external information, including language/supports and available for learning
- Adult provides instructional strategies utilizing VIM (visual instruction mode), VOM (visual instruction mode), VEM (visual expression mode) and spoken language. The visual supports help the child with executive/emotional/motor skills development which in turn promote coping skills

PHASE I - Period of growth: Infancy

- Co-Regulator provides maximum support - majority of support is provided by the co-regulator
- Child demonstrates minimum ability to self-regulate through sensory exploration (i.e. basic foundational skills of self-regulation are developing; bilateral upper extremity use, rocking, sucking thumb)

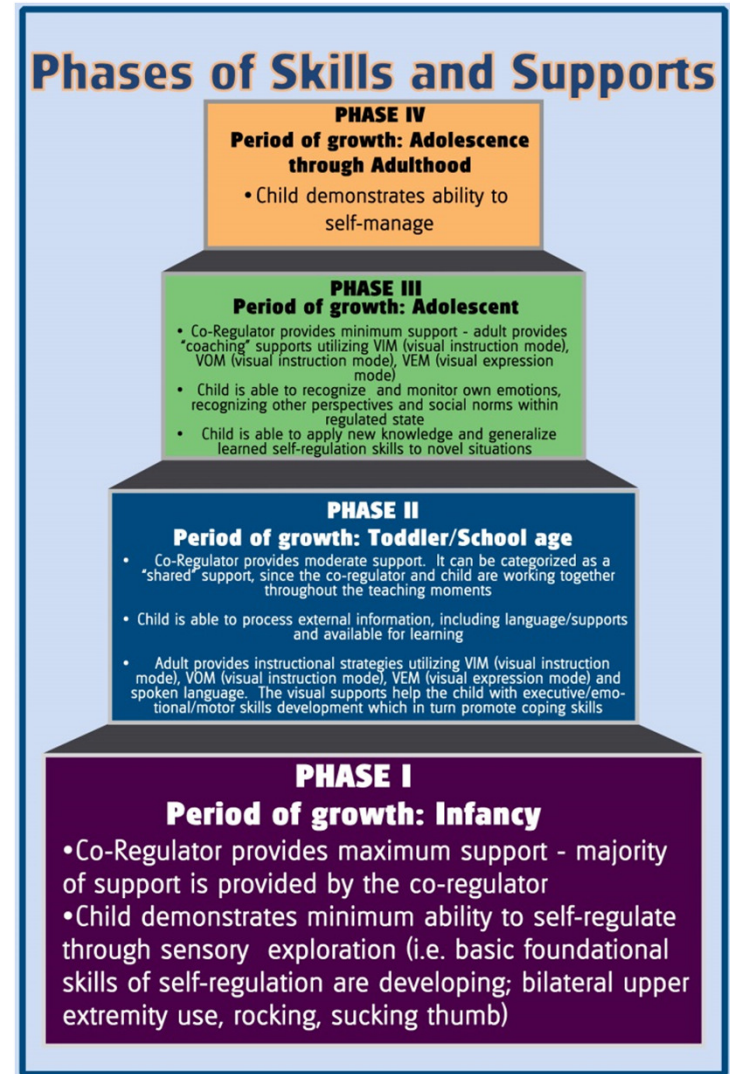

PHASE I

- Period of Growth : **Infancy**
- Co-Regulator provides maximum support
- Child initiates learning with sensory exploration
- The categories of skills are observed: emotions, motor, executive

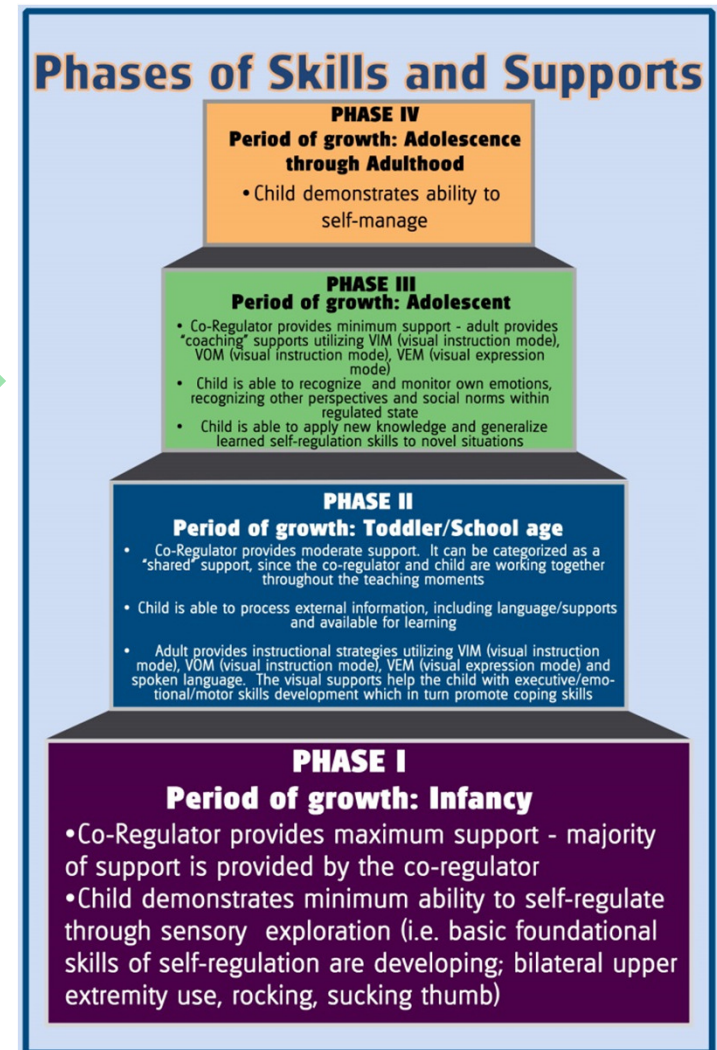

PHASE II

- ❑ Period of Growth: **Toddler/School age**
- ❑ Co-Regulator provides moderate support/ “coaching” support
- ❑ Child is able to learn with visual instructions, including modeling
- ❑ The categories of skills are observed: emotions, motor, executive

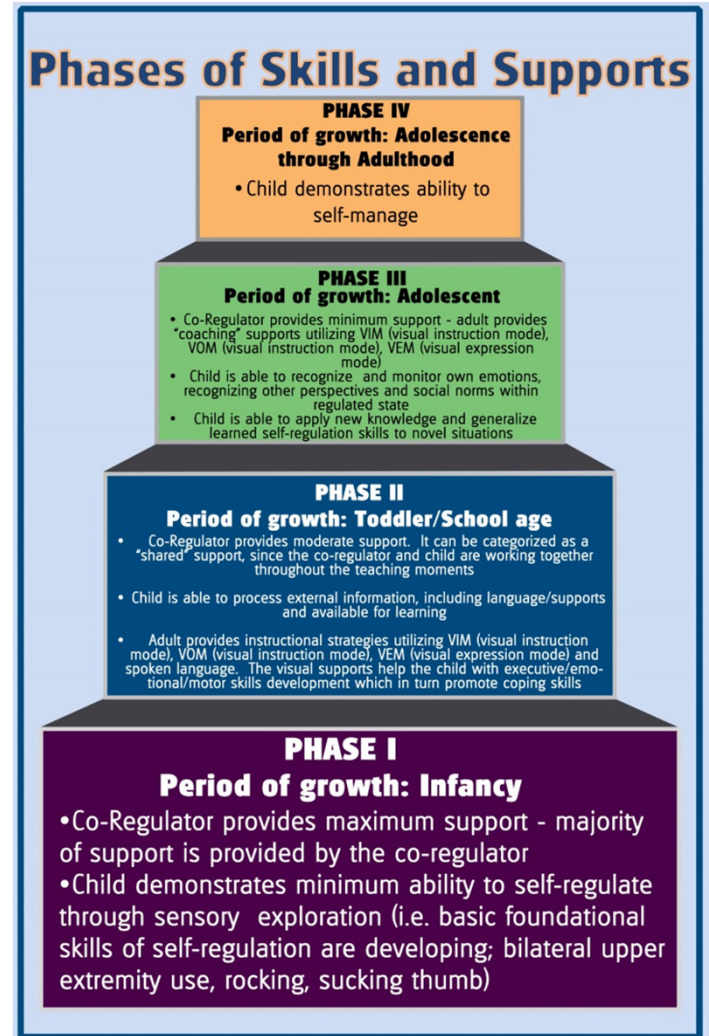

PHASE III

- ❑ Period of Growth: **Adolescent**
- ❑ Co-Regulator provides minimum support/ “shared” support
- ❑ Child is able recognize and monitor own emotions
- ❑ Child is able to apply and generalize learned self-regulation skills to novel situations
- ❑ The categories of skills are observed: emotions, motor, executive

PHASE IV

- Period of Growth: **Adolescence through Adulthood**
- Adolescent/Adult are able to self-manage
- Co-Regulator role – friend/partner
- The categories of skills are observed: emotions, motor, executive

Executive Functioning Assessments

- Behavior Rating Inventory of Executive Function, Second Edition (BRIEF-2)
 - ▣ Behavior Regulation Index: Inhibit & Self-Monitoring
 - ▣ Emotion Regulation Index: Shift & Emotional Control
 - ▣ Cognitive Regulation Index: Initiate, Working Memory, Plan/Organize, Task-Monitor & Organization of Materials
- Visual Representation Assessment (VRA)
- Monarch Assessment of Instructional Visual Supports (MAIVS)

Providing Supports

Teaching tools used to facilitate students' engagement and participation in the school and community

Sensory Processing Supports: Multisensory Programming

□ Individualized multisensory programming across the school environment

- ▣ Regulation boards
- ▣ Sensory schedules
- ▣ Multisensory learning materials

Time	Session	Pick 1: Sensory	Pick 1: Positioning/Exercise
8:25	Arrival: Snack/Sensory Speech	Beanbag Squishes OR Wall Push-Ups	SIDE SIT OR TALL KNEEL  OR 
9:00	Morning meeting	Body Sock OR Callisthenic Exercises (Jumping Jacks/Squats/Toe Touches)	SUPERMAN OR PLANK  OR 
9:30	Goal Work: Gross Motor (T/TH)	Yoga Stretch OR Shaving Cream	SIT UPS OR DONKEY KICKS  OR 

Sensory/movement schedule

I need to slow down!

Loss of Some Control → Ready to Learn

Use tools to get in the green zone.

I need to get moving!

Moving Slowly → Ready to Learn

□ Zones of Regulation

What zone am I in?

REST AREA GO SLOW STOP

sad	tired	calm	I'm ready to work	silly or wiggly	upset	frustrated	mad
sick	bored	happy	I'm okay	hyper	confused	yelling	hitting

Use tools to get in the green zone

drink of water	count	deep breaths	squeeze and release	wall push ups	use fidgets	draw	write this	talk with adults
take a break	self talk	take a walk	stretch	volcano breath	lift something heavy	ask for a snack	think of a calm place	listen to music

The ZONES of Regulation™ Reproducible 12

ZONES Check-In

I  feel .

I'm in the Zone.

Emotional Regulation Teaching Tools

continue

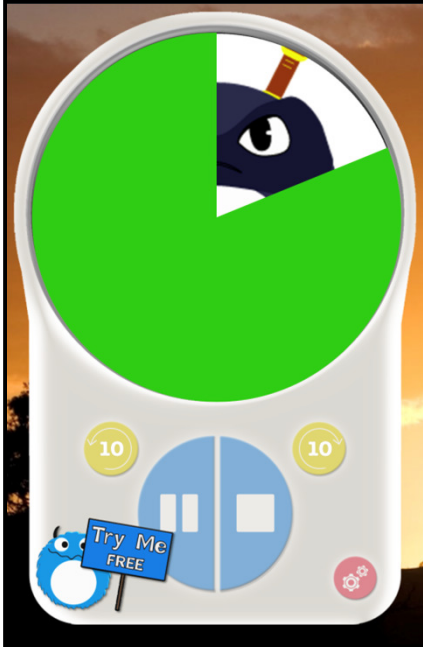

Conscious Discipline

- Conscious discipline integrates social-emotional learning and discipline
- Values connection and relationship with the student
- Your behavior and your reaction is what affects our students and guides their understanding in how to react to the challenges
- ***The student is doing the best they can with the tools they have been given***

Executive Functioning Supports

- Monarch Model
 - Visual Instruction Mode (VIM)
 - Visual Organization Mode (VOM)
 - Visual Expression Mode (VEM)

Executive Functioning Supports: VOM

Visuals for Shifting

- Timers
- Transition Cards

Executive Functioning Supports: VOM

Visuals for Planning

- Macro-Schedule
- Micro-Schedule

“Children do well if they can...
if they can’t, we as adults need to
figure out what’s getting in the way, so
we can help.”

-Ross Greene, “The Explosive Child”
